

# MAPLE LANE AG-BAG, LLC

655 W. Anderson • Linwood, MI 48634

**(989) 313-0280 Mike**

## To All Our Valued Customers,

After 42 years as a dealer for Ag-Bag Silage Baggers, plastics, parts and service, we are retiring and selling the dealership. The new owners will be continuing with the name Maple Lane Ag-Bag, LLC. During the first year of this transition, Glenn Knochel will be working with the new dealer.

The new dealership is located 12 miles from the current location in Kawkawlin. The aim for the new dealer, Mike and Derek Backus, is to provide the same customer service for sales, parts and service that you, our valued customers, have grown accustomed to receiving these past 42 years. They will also continue to rent Baggers and Roller Mills.

With grateful appreciation,

Glenn and Joy Knochel

## TIME TO UPGRADE to the T-Series Ag-Bagger!

Upgrade to a T7170 or T7060 Ag-Bagger® by RCI and begin your own transformation. With the revolutionary rotor, forage distributor, wider conveyor, and sweeping tunnel cleanout, you can have increased capacity both at the machine and in the Genuine Ag-Bag. The award-winning T-Series Ag-Baggers provide increased efficiency, capacity and easier to use operator controls.

Visit your local Ag-Bag dealer to learn about the transformation of Ag-Bag by RCI!

**Better Storage  
Better Forage**

## T7270 Ag-Bagger

### Introducing the 1000-RPM PTO Planetary Driveline

The T7270 features a 1000-RPM PTO planetary gear driveline rated at 200-horsepower, achieving greater power for forage packing. Operators can now use larger tractors on their T7270 Ag-Bagger. This powertrain consistently generates smooth, durable power to handle varying crop load and crop types. The T7260 Ag-Bagger is a powerful, high-capacity machine built for the commercial forage operator.

## SALES – SERVICE – RENTAL AG-BAG Silage Baggers

- Automatic Roller Mills
- Used Roller Mills & Baggers
- Silage Bags
- Bunker Covers

Enhanced Forage Inoculant  
Introducing an enhanced forage inoculant, available in dry and water soluble, featuring a reformulated bacterial blend. Inoculant protects your forage by providing aerobic stability and preserving forage nutrients.

*B. pumilus* and *L. buchneri* work to finalize the fermentation process to prevent molds and forage heating.
